

User Manual

On the github we uploaded an .ZIP that will contain all the projects and settings.

To implement the project:

1. Import the repository with the five projects;
2. Generate the WebServiceClient of the currency system on the BankService project;
3. Generate the WebService on the BankService project with the class bank.BankService;
4. Generate the WebServiceClient of the previous WebService on the IfsCarsService project;
5. Generate the WebService on the IfsCarsService project with the class ifscarsservice.CarSeller;
6. Generate the WebServiceClient of the previous WebService on the IfsCarsServiceClient project;
7. Run the servers: Tomcat server and the ifscars.Server;
8. Run the clients: eiffelcorp.Client and ifscarsserviceclient.ClientStub;
9. The results will appear on the console.
